

Publication Ethics

This Publication Ethics Statement is based on the guidelines and standards developed by the Committee on Publication Ethics (COPE).

Editors' responsibilities

- The editor of the AE Proceedings is responsible for deciding which of the papers submitted to the conference should be published.
- The editor will base the decisions solely on the papers' quality and relevance to the AE conference's scope.
- All submitted papers are subject to strict, double-blind, peer-review process by international reviewers that are experts in the area of the particular paper.
- The only factors that are taken into account in reviews are relevance, correctness, originality, readability and language.
- The editor and the editorial staff will not disclose any information about a submitted paper to anyone other than the corresponding author and reviewers.
- Unpublished materials disclosed in a submitted paper will not be used without the consent of the author.
- The editor will encourage reviewers to comment on possible research and publication misconduct, redundant publications and plagiarism.

Reviewers' responsibilities

- Reviewers should evaluate manuscripts solely for their intellectual content without regard to race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.
- Reviewers should keep all information regarding papers confidential and treat them as privileged information.
- Any selected reviewer who feels unqualified to review the manuscript or knows that its prompt review will be impossible should notify the editor.
- Reviewers should express their views clearly and with supporting arguments.
- Reviewers should call to the editor's attention any substantial similarity or overlap between the reviewed manuscript and any other published paper of which they have personal knowledge. They also should identify relevant published work that has not been cited by the authors.

Authors' responsibilities

- Authors have to certify that their manuscripts are their original work, that the manuscripts have not previously been published elsewhere, and that the manuscripts are not currently being considered for publication elsewhere.
- All authors mentioned in the paper must have significantly contributed to the research.
- Authors should identify all sources used in the creation of their manuscript.
- Authors have to state that all data in the paper are real and authentic.
- Authors are obliged to provide corrections of mistakes if their papers are evaluated as "accepted with revisions".
